Projects and applications¶. The term project describes a Django web application. The project Python package is defined primarily by a settings module, but it usually contains other things. For example, when you run `django-admin startproject mysite` you'll get a mysite project directory that contains a mysite Python package with `settings.py`, `urls.py`, `asgi.py` and `wsgi.py`.

Application commands are native ways to interact with apps in the Discord client. There are 3 types of commands accessible in different interfaces: the chat input, a message's context menu (top-right menu or right-clicking in a message), and a user's context menu (right-clicking on a user).

Discord Developer Portal

You can assign buttons/keys to perform different commands in different programs. For example, you can assign the same button/key to activate Digital Ink when in PowerPoint, a macro when in a game, and the Magnifier when in any other application. Reassign a button or key for a specific application. Click App-specific settings.

How do I configure application-specific settings for a ...

For example, the Mac App Store doesn't require you to notarize your application because the upload process includes similar content validation to notarization. If you are targeting a specific digital distribution service with your build, check the documentation for that Digital distribution service first to check if the requirements differ.

Unity - Manual: Building your macOS application

External-DNS controller: Watches for Kubernetes Ingress resources and creates DNS A records in the cluster-specific DNS zone. Deploy HTTP routing: CLI. The HTTP application routing add-on can be enabled with the Azure CLI when deploying an AKS cluster. To do so, use the `az aks create` command with the `--enable-addons` argument.
