Riemann zeta function. The Riemann zeta function is defined for complex s with real part greater than 1 by the absolutely convergent infinite series $\zeta(s) = \sum_{n=1}^{\infty} \frac{1}{n^s}$. Leonhard Euler already considered this series in the 1730s for real values of s , in conjunction with his solution to the Basel problem. He also proved that it equals the Euler product $\zeta(s) = \prod_p \frac{1}{1 - p^{-s}}$ where the infinite
