Video: New dynamic array functions in Excel (about 3 minutes). Notes: XLOOKUP and XMATCH were not in the original group of new dynamic array functions, but they run great on the new dynamic array engine. XLOOKUP replaces VLOOKUP and offers a modern, flexible approach that takes advantage of arrays. XMATCH is an upgrade to the MATCH function, providing new capabilities to INDEX and MATCH formulas.

The SHEET function returns the index number of a sheet in Excel. You can use the SHEET function to get a numeric index that represents the order of sheets in an Excel workbook, starting with 1 on the left and ending with N on the right, where N is the total number of sheets in the workbook.

How to use the Excel SHEET function | Exceljet

The Conditional Formatting technique only works with formulas that individually reference cells, i.e. won't work with a range e.g. =SUM(A1:A5) but will work with =SUM(A1,A2,A3,A4,A5) It only works with Excel 2013 or later as it requires the FORMULATEXT function which was new in Excel 2013.

Highlight Cells Referenced in Excel Formulas

To demonstrate you the difference between the functions, we've calculated the metrics for the dashboard in two different ways: On the left, we've used nested IF formulas. On the right, we've used the IFS functions. As you can see, both approaches work correctly and eventually give you the same numbers.

Google Sheets IF AND Other Logical Functions | Coupler.io Blog

Excel supports more than 480 formulas as functions, or pre-built formulas. According to Microsoft, some of the most popular include the SUM function, the FI function, the LOOKUP function, the VLOOKUP function, and the MATCH function.
