General Anaesthesia In Dental Practice

General Anaesthesia for Dental Treatment. General Anaesthesia (GA) refers to being “put to sleep”. During GA, you are unconscious. This is different from conscious sedation: sedation means you can sort of communicate and your protective reflexes are intact. General anaesthesia means you can't do either.

General Anaesthesia for Dental Treatment

General anesthesia You'll be completely unconscious, have no pain, your muscles will be relaxed, and you'll have amnesia from the procedure. The medication is given through a face mask or IV.

Understanding Dental Anesthesia: Types, Side Effects & Risks

General anesthesia as administered to the hospitalized patient represents the fundamental technique from which the other forms of general anesthesia have developed. As a rule, this mode of anesthesia delivery is used in dentistry for the more severely medically compromised patient (ASA 3 or 4) and for patients undergoing extensive and possibly traumatic dental procedures.
