Pemphigus foliaceus (PF) is the most common autoimmune skin disease in dogs and cats. It is also the most common variant of pemphigus diseases, 1,2 which are characterized by autoantibodies that target keratinocyte desmosomal proteins, leading to loss of cell-to-cell adhesion (acantholysis). Acantholysis of keratinocytes causes separation and loss of integrity of the epidermal cell layers ...

The hip joint can be surgically replaced with a prosthetic device: the surgery may require the total joint replacement (total hip arthroplasty, THA) [ ], when both patient's femoral head and acetabulum are removed, or the hemi-replacement when only a part of the joint is replaced. The hip resurfacing arthroplasty (HRA) is an alternative to the conventional THA: the femoral head is not removed ...
