SI=SI+1 DI=DI+1 . REP instruction is used to repeat the step until value of CX is not equal to zero and value of CX is decremented by one at every step, i.e., CX=CX-1 . MOVSB instruction is used to transfer bytes only from source memory location (MADS) to destination memory location (MAES). MADS-->MAES where MADS=DS*10+SI MAES=ES*10+DI . Here, value of SI and DI is updated automatically.

8086 program to transfer a block of bytes by using string ...

x86 assembly language is the name for the family of assembly languages which provide some level of backward compatibility with CPUs back to the Intel 8008 microprocessor, which was launched in April 1972. It is used to produce object code for the x86 class of processors.. Regarded as a programming language, assembly is machine-specific and low-level.Like all assembly languages, x86 assembly ...

A researcher presents participants with the following description: Librarians enjoy all genres of music. Most participants incorrectly select Option 2, even though the librarian is in a hard rock band in both options. Option 1: A librarian is in a hard rock band. Option 2: A librarian is in a hard rock band and a jazz band.
