Success In Africa The Onchocerciasis

The Onchocerciasis Control Program in West Africa A Long-term Commitment to Success Bernard H. Liese John Wilson Bruce Benton and Douglas Marr Among African health programs, this program to control "riverblindness" is an exceptional recent success story. Here are some lessons from it.

The Onchocerciasis Control Program in West Africa

A recent article "Is onchocerciasis elimination in Africa feasible by 2025: a perspective based on lessons learnt from the African control programmes" in Infectious Diseases of Poverty claimed that undue influence on African programs by concepts developed by the Onchocerciasis Elimination Program of the Americas (OEPA) is detrimental to stopping mass drug administration (MDA) in Africa.

The positive influence the Onchocerciasis Elimination ...

The long-term support of onchocerciasis control, together with sustained political commitment of national governments, bilateral donors, and non-governmental development organisations (NGDOs), is a major, yet unheralded public health and development success story in Africa.

The Future of Onchocerciasis Control in Africa

Fortunately, the African Programme for Onchocerciasis Control has shown tremendous success in eliminating river blindness in Senegal. Of all the people infected, 90 percent live in African Regions, particularly around fertile river valleys. In these areas around 50 percent of men over the age of 40 have been blinded because of the disease.

The 11 countries covered by Onchocerciasis Control Programme in West Africa (OCP) Achievements When the OCP ended in 2002, it had succeeded in eliminating onchocerciasis as a public health problem in 10 out of the 11 countries in which it operated (see maps).

WHO | Onchocerciasis Control Programme in West Africa (OCP)

In 1995, the African Programme for Onchocerciasis Control (APOC) was launched with the objective of controlling onchocerciasis in the remaining endemic countries in Africa. It is a global partnership which brings together endemic African countries, donors, Non-Governmental Development Organizations (NGDOs), the private sector and the affected communities.

WHO | Prevention, control and elimination of onchocerciasis

The Onchocerciasis Control Programme in West Africa (OCP) started operations in 1975. Its main objectives were to eliminate human onchocerciasis, as a disease of public-health importance and an obstacle to socio-economic development, from the Programme area. By the end of 2002, the OCP covered 11 We ...

The Onchocerciasis Control Programme in West Africa (OCP)

With the demonstrated success of elimination of transmission of onchocerciasis in the Americas, many countries in Africa are now making a shift from control to elimination of the disease. This is being achieved through expanded treatment to cover not just those at risk of morbidity, but also those contributing to transmission and through more rigorous monitoring and evaluation.
