The radian, denoted by the symbol rad, is the SI unit for measuring angles, and is the standard unit of angular measure used in many areas of mathematics. The unit was formerly an SI supplementary unit (before that category was abolished in 1995) and the radian is now an SI derived unit. The radian is defined in the SI as being a dimensionless unit with  $1 \text{ rad} = 1$ .

Segal argued that what a test measures depends on stakes; high-stakes tests measure cognitive skills, but low-stakes (i.e., unincentived) tests can measure both personality (intrinsic motivation and the tendency to exert effort) and cognitive skills. A particularly good indicator of personality for a test would be one in which the knowledge ...

A recognized shortcoming of many decriminalization measures—and of Measure 110 in particular—is the failure to expunge past convictions for things that are no longer criminalized. Jack still has a felony. Jack, who unequivocally supported Measure 110, reflected on how different his life might be had it been in effect before his conviction.
