### The Physics Of Consciousness: The Quantum Mind And The ...

The physics of the waking consciousness is a matter of how well the biological replicates the intentions of the quantum self. The theory here is that the field carries the perception. In our neurons, in the micro tubules, in the Dimer cavity, is a sub molecular energy drain that is a field unlike any other which may be found up above in the brain.

Gamma waves are associated with large-scale coordinated activities like perception, meditation or focused consciousness; beta with maximum brain activity or arousal; and theta with relaxation or daydreaming. These three wave types work together to produce, or at least facilitate, various types of human consciousness, according to Fries.

### Applying physics to understanding the mystery of consciousness

It’s physicalist by saying that consciousness is purely described by the laws of physics. There’s a sense in which the laws of physics inexhaustibly describe the world. There’s really not much room for, say, consciousness, for example, to have causal efficacy, because then you would wonder, well, there’s some variable in the equation that’s missing.

Consciousness and Quantum Physics One of the first ways that consciousness and quantum physics come together is through the Copenhagen interpretation of quantum physics. In this theory, the quantum wave function collapses due to a conscious observer making a measurement of a physical system.

The quantum field or pure consciousness is influenced by intention and desire. All atoms in the entire universe are capable of mind reading and communicating with other atoms. There is a consciousness in every molecule of matter. As per quantum physics things do not exist in its physical form, unless they are observed by a conscious observer.

### Scientists Use Physics to Understand the Mystery of ...

The Physics of Consciousness by Evan Harris Walker makes a great case for consciousness as a property of electrons 'quantum tunneling' through the brain. If you haven't heard of quantum tunneling, this is where the electrons in atoms are all the time blipping out in one location and blipping back in at another location without ever crossing the space in between.

**The Physics of Consciousness - Richard Merrick**

Mainstream scientists like to say that the brain creates consciousness and that consciousness cannot survive without the brain. But, under the quantum theory of consciousness, it's just as plausible to argue that consciousness exists before the formation of the brain and therefore can exist after the death of the brain.
