## **FAULT CODE LISTING FOR ZF WG110 TRANSMISSION**

ZF FreedomLine ® transmission control unit (TCU) uses a series of fault codes to identify system malfunctions that the TCU detects and stores into memory. After you retrieve a fault code from the instrument panel display and identify the fault, use a volt-ohm meter (VOM) to test the area where the fault code indicates that the malfunction has occurred.

The fault code can only be set if the engine speed exceeds 200 rpm, the power supply voltage of the components and the ignition is more than 9 V and less than 32 V. Electronic braking must be activated by the control unit. The malfunction code is automatically cleared if the vehicle has 40 start cycles without detecting a malfunction.
